5. Slide 5: Hiding content
6. Slide 6: Custom alert boxes
7. Slide 7: Vertical spacing

Slide 1: Overview

The `SRD-theme` is based on the [Marp](#) default theme, but adds certain CSS extensions and font customization, which makes it fit for the Marpit extension for VSCode.

This is a subtitle

This is a subsubtitle

- List item 1
 - List item 2 with a [link](#)
1. **Numbered** list item 1
 2. *Numbered* list item 2 with italics
 3. Numbered list item 3 with underline

i A blockquote with an info icon

Slide 2: How to use the theme

Instructions to use a custom theme from [Marp discussion](#):

1. In VsCode, hit F1 and run "Preferences: Open Workspace Settings".
2. Search "Themes" and find out Markdown > Marp: Themes.
3. Add a path `theme.css` . Now ready to use "srd-theme".
4. Open `demo.md` , and confirm the root of current workspace is the working folder you've made.
5. Open Markdown preview.

```
---  
marp: true  
theme: your-theme  
---
```

Slide 3: Add-ons. Text columns

We have added the possibility to embed columns in the slide, using the scoped

`twocolumn` class:

`<!-- _class: twocolumn -->` and defining two different `<div>` elements, one per column.

Suscipit nisl nostra ligula quis tellus fringilla libero. Efficitur parturient lobortis placerat class laoreet lectus pharetra turpis pulvinar. Bibendum lectus lobortis vivamus platea semper.

Additionally, it includes the usage of bootstrap icons , that can be added with the code

```
<i class="bi bi-icon-name"></i>
```

Important

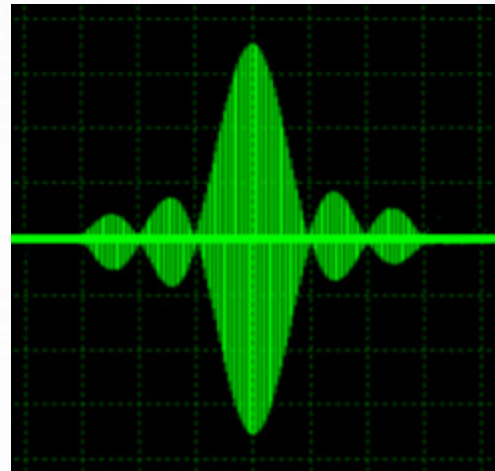

This is a requirement for the usage of the [Custom alert boxes](#).

Fringilla curae ut viverra dui augue sollicitudin netus. Mi parturient montes vitae rutrum condimentum primis eu scelerisque. Varius luctus purus ornare cubilia fames lobortis fames nostra sit. Libero aenean arcu molestie scelerisque adipiscing montes curabitur.

Slide 4: Add-ons. Figures

Apart from the regular [image syntax](#), we have added a new class `center` to allow for images to be centered in the slide, with the code:

```
![center](figures/image.png)
```

Slide 5: Add-ons. Hiding content

The `hide` span class can be used to hide content from the slide, and display it only when hovering over the slide. To do so, use ``.

- Let's hide a math formula

And hide an image:

Tip

Mouse over the blank space to see the hidden content.

Slide 6: Add-ons. Custom alert boxes

We have also added several classes for custom blockquotes (inspired by [GitHub](#)):

Note

Add it with class `note`.

Tip

Add it with class `tip`.

Important

Add it with class `important`.

You can also embed icons and links:  

Warning

Add it with class `warning`.

- Add lists
- and other items.

Error

Add it with class `error`. You can also add error text and span multiple lines.

Slide 7: Add-ons. Vertical spacing

We have added a vertical spacing to fit full height, using a `<div>` :

```
<div class="row content"></div>
```

Now a blockquote / footnote.
